

KHAN ACADEMY

Khan Academy is a free online resource that allows students to learn anytime, anywhere, with material that is uniquely appropriate for them. Students can explore new topics and strengthen their math skills by using interactive practice and tutorials. As students learn, their activity feeds into reports that show important information such as strengths and weaknesses in a particular concept. By using Khan Academy, I'll be able to provide a more personalized learning experience for your child.

- Important: Remember this site is FREE
- You can create an account if you want to track your child's progress or you can just have your child watch the videos and take the quizzes without creating an account.
- How to access lessons: In the upper left hand corner choose SUBJECTS, then choose MATH BY GRADE, select the math domain you would like your child to work on. The arrows are video lessons (excellent) and the stars are practice quizzes.

If you want to see how your child is learning on Khan Academy, I encourage you to create your own Khan Academy account as well. You'll be able to see what your child is working on, and there's plenty of material on the site for you to learn anything you want, too. Simply go to www.khanacademy.org and click Sign Up to get your own account.
